# 7<sup>th</sup> Grade Subject Spotlight

## Mathematics:

Students in seventh grade will now be working on mathematics skills that they will see in the real world. Budgeting, careers, and shopping skills will be discussed.

## English Language Arts:

In ELA, we will continue to read short story selections from the anthology. Also, students will focus their writing on some

creative pieces. At home, feel free to have conversations with your student regarding their independent novels. Such conversations can help strengthen comprehension.

Students will also be working on varying sentence structure in our writing, as well as analyzing plot, characterization, and theme in literature.

## Social Studies:

We will finish out the year with our final unit on the many empires of Asia, including Yuan, China, Korea, Vietnam, and Japan. Students should be proud of all they have accomplished - we have learned about early cultures and civilizations from all around the world!

## Science:

During the fourth marking period in science class the topic of study is astronomy. Students will study the planets, asteroids, comets, meteors, galaxies, stars, and interactions between the sun, Earth, and moon.

## STEAM:

The STEAM students have been learning how Artificial Intelligence

can be used to help our planet! Students check on plants through an app on their phones and are able to change the water sequences that take care of the plants when class is not in session. In the remaining few weeks, students will look at media creation and begin designing and editing content of their own.
