# 7<sup>th</sup> Grade

## SUBJECT SPOTLIGHT:

### **Mathematics:**

Students in seventh grade will now be working on mathematics skills that they will see in the real world. Budgeting, careers, and shopping skills will be discussed.

### **English Language Arts:**

In ELA, we will continue to read short story selections from the anthology. Also, students will focus

their writing on some creative pieces. At home, feel free to have conversations with your student regarding their independent novels. Such conversations can help strengthen comprehension.

Students will also be working on varying sentence structure in our writing, as well as analyzing plot, characterization, and theme in literature.

### **Social Studies:**

Students are finishing a Social Studies unit on Ancient Rome and beginning our last unit on the Aztec, Inca, and Maya civilizations of Central and South America.

### **Science:**

In Science, students will finish their studies by investigating the Sun, Earth, and Moon interactions. Moon phases, ocean tides, and eclipses will be studied and modeled.

### **STEAM:**

The STEAM students have been learning how the HMS greenhouse

is maintained by the FarmBot Genesis! Students check on plants through an app on their phones and are able to change the water sequences that take care of the plants when class is not in session. In the remaining few weeks, students will look at media creation and begin designing and editing content of their own.
